

Double action electric hydraulic pump, one hose for oil entering, other one for oil outlet, with magnetic valve.

Double action electric hydraulic pump

model	Way of oil output	Pressure Rating: (kgf/sq. cm)	Oil delivery (cc/stroke)	Reservoir Capacity (cc)	Weight (kg)	remarks
Blf-700ab	double hole oil output	700/1000	20-700	0.32-2.6	34	Dual action

split-unit hydraulic crimper:

Ram stroke: 24mm

Output: 100T

Use scale: Cu/Al:76mm steel:36mm.

Crimping Type: hexagon

Weight: 40kg

It is designed for crimping overhead tension on 110KV or above,also for underground cable connecting.

Max sleeve size 71mm,wide crimping range and less crimping times could reduce crimping distortion and control elongation

Dual active hydraulic cylinder could prevent spring from plastic fatigue and avoid the trouble of slow reset.

Reset hydraulic cylinder could shorten piston reset time.

Movable dies could be open and close quickly to make operation and position much easier.

Simple design for easy maintenance.

Only work with matched dual active hydraulic pump.
